

Ingenious Inc wins major Training Simulator project from Pemex, Mexico for its ProDyn software

Houston, Texas, September 2010 – Ingenious Inc is pleased to announce that it has been awarded a project to provide its proprietary operator training simulator (ProDyn) to Petróleos Mexicanos (PEMEX). Ingenious won this prestigious project with its partner company: Ingeniería en Optimización de Procesos (IOP).

Ingenious CEO, Vibhu Sharma commented "We are excited to do this large & prestigious project in partnership with IOP. We believe this will help Pemex establish a world class simulator system. This project award endorses the fact that Ingenious provides world class technology that was selected after rigorous evaluations and amidst stiff competition".

Lorenzo Okie, President of IOP added "We are delighted to work with Ingenious on this initiative. This is the second such project that we have successfully won with Ingenious and it firmly establishes our company and technology in Pemex. We look forward to our continued relationship with Ingenious in advanced solutions".

PEMEX is the biggest enterprise in Mexico and Latin America and the highest fiscal contributor to Mexico. It is one of the few oil companies in the world that develops all the productive chain of the industry, upstream, downstream and final product commercialization.

Ingenious' operator training simulator, ProDyn, is OPC compliant and Web Enabled and will offer PEMEX a user-friendly graphical interface with features such as malfunctions, backtrack, snapshots, automatic training exercises, trainee performance evaluation, multiple access levels, trending charts, event monitors, alarm management, directory tree and more.

This project is critical to PEMEX because it will enable PEMEX to train its operators and engineers on fundamental cogeneration, cryogenic and gas plant operations, improve their ability to optimize plant performance and identify operational and physical constraints in a safe training environment.

About Ingenious: Ingenious Inc is a fast growing process solutions company, providing cutting edge training solutions, planning & scheduling, real time performance monitoring, & process consulting. Since 2000, Ingenious Inc has been providing solutions to the oil and gas, power, petrochemicals, refining, and chemical industries. The company has over 150 clients globally, including several Fortune 500 companies. For more information, please visit www.ingeniousinc.com

About IOP: IOP has been providing modeling and simulation services to the Mexican market for more than 10 years. It has expertise and experience modeling gas and petrochemical complexes. IOP also represents partner companies for asset management for Control Systems (Expertune), informatics for laboratory management systems (LIMS from ThermoFisher) and other market leading technologies.
